

# **Digital Assignment -1**

**Course Code: CSE3002**

**Course-Name: Internet & Web Programming**

Create your own website using HTML and CSS. The site will contain your personal information. The information can be fictional.

Website content:

- 3 pages -
  - Home
  - My Academic - your academic information
  - Contact Me - your email address, and a contact form
- Home page:
  - A floating header containing the following, as floating elements
    - Your name at the top with h1 heading - floating at left, 40% width
    - A horizontal menu bar floating at right 60% width - Home, Accomplishments, Academic, About Me, Contact Me
    - Set background/other styles so that it stands out and the menu links are clickable when you scroll to other sections
  - A container - max-width 1200px, center aligned with css, everything below will go inside this container as a section div.
  - Section 1: height 600px with borders, write your career summary here, place your picture at top right corner as floating element, picture width 200px
  - Section 2: Add a video with width 1000px (your intro video or any other)
  - Section 3: your Accomplishments, use unordered list for each of them
  - Link this accomplishment section to the menu item at top horizontal menu
  - Section 4: About Me section, link this section to the menu at menu bar
  - A footer: use the copyright message from assignment 1
- My Academic page:
  - Use the header and footer from the home page
  - List out your academic information like the academic part from your resume
  - Adjust the menu links targeting on home page
- Contact Me page:
  - Use the header and footer from the home page
  - Write your email address
  - Create a contact form
  - Adjust the menu links targeting on home page
